Error message

There is a security update available for your version of Drupal. To ensure the security of your server, you should update immediately! See the available updates page for more information and to update your software.

There are security updates available for one or more of your modules or themes. To ensure the security of your server, you should update immediately! See the available updates page for more information and to update your software.

Add contributed modules to extend your site's functionality.

Regularly review available updates and update as required to maintain a secure and current site. Always run the update script each time you update software.

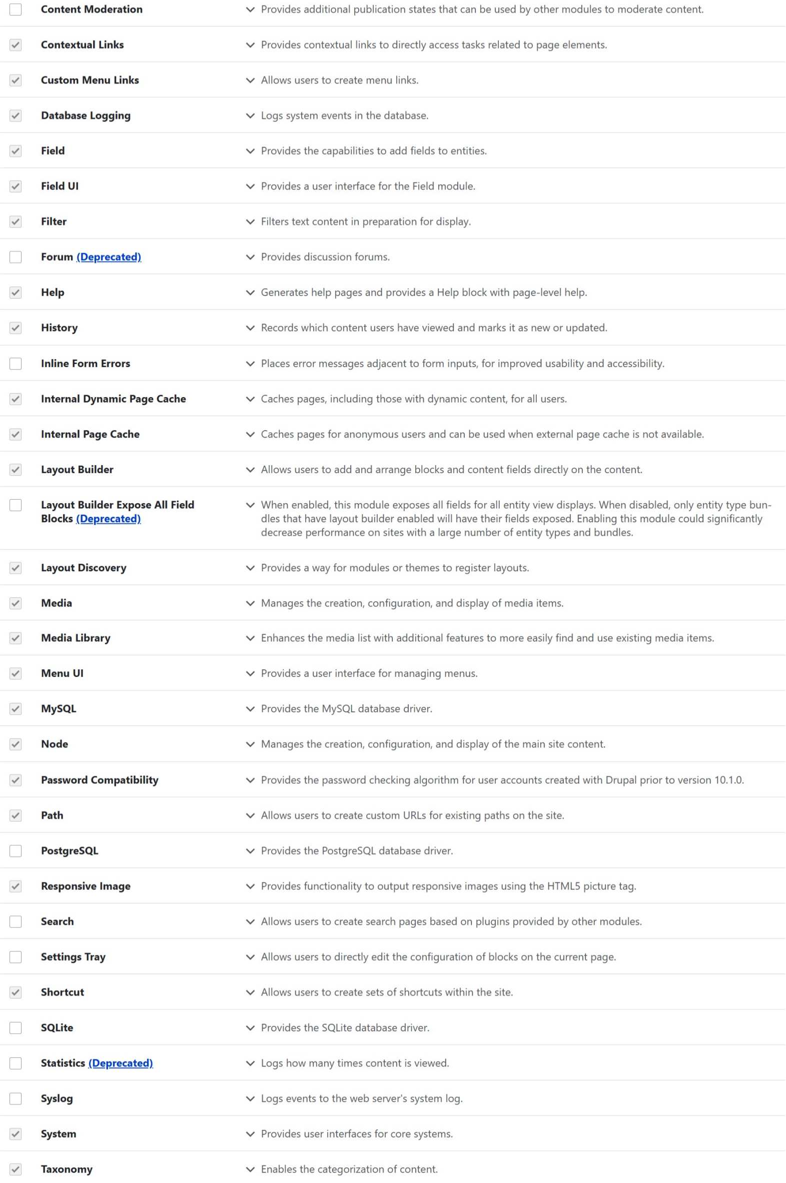
Congratulations! You have successfully installed the Webform module. Learn more about the Webform module and Drupal
Please make sure to install additional third-party libraries, sub-modules and optional add-ons.

Filter

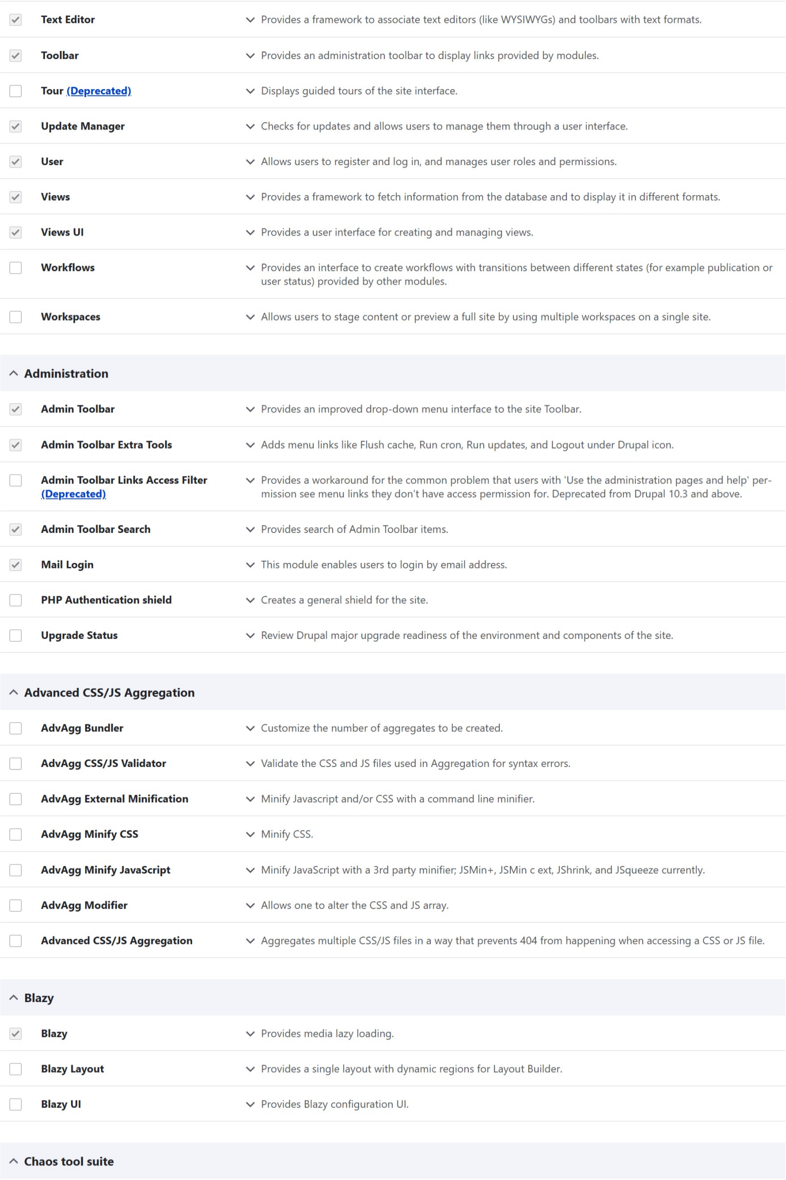
Filter by name or description

Core

☐	**Actions UI** (Deprecated)	Allows configuration of tasks to be executed in response to events.
☐	**Activity Tracker** (Deprecated)	Displays recently added and updated content.
☐	**Announcements**	Displays announcements from the Drupal community.
☑	**Automated Cron**	Provides an automated way to run cron jobs, by executing them at the end of a server response.
☐	**Ban**	Allows banning visits from specific IP addresses.
☑	**BigPipe**	Sends pages using the BigPipe technique that allows browsers to show them much faster.
☑	**Block**	Allows users to configure blocks (containing content, forms, etc.) and to place them in the regions of a theme.
☑	**Block Content**	Allows the creation of content blocks and block types.
☐	**Book** (Deprecated)	Allows users to create and organize related content in an outline.
☑	**Breakpoint**	Manages breakpoints and breakpoint groups for responsive designs.
☑	**CKEditor 5**	Provides the CKEditor 5 rich text editor.
☑	**Color**	Allows users to change the color scheme of compatible themes.
☑	**Comment**	Allows users to comment on content.
☑	**Configuration Manager**	Allows importing and exporting configuration changes.
☑	**Contact**	Provides site-wide contact forms and forms to contact individual users.



☐	**Content Moderation**	Provides additional publication states that can be used by other modules to moderate content.
☑	**Contextual Links**	Provides contextual links to directly access tasks related to page elements.
☑	**Custom Menu Links**	Allows users to create menu links.
☑	**Database Logging**	Logs system events in the database.
☑	**Field**	Provides the capabilities to add fields to entities.
☑	**Field UI**	Provides a user interface for the Field module.
☑	**Filter**	Filters text content in preparation for display.
☐	**Forum** (Deprecated)	Provides discussion forums.
☑	**Help**	Generates help pages and provides a Help block with page-level help.
☑	**History**	Records which content users have viewed and marks it as new or updated.
☐	**Inline Form Errors**	Places error messages adjacent to form inputs, for improved usability and accessibility.
☑	**Internal Dynamic Page Cache**	Caches pages, including those with dynamic content, for all users.
☑	**Internal Page Cache**	Caches pages for anonymous users and can be used when external page cache is not available.
☑	**Layout Builder**	Allows users to add and arrange blocks and content fields directly on the content.
☐	**Layout Builder Expose All Field Blocks** (Deprecated)	When enabled, this module exposes all fields for all entity view displays. When disabled, only entity type bundles that have layout builder enabled will have their fields exposed. Enabling this module could significantly decrease performance on sites with a large number of entity types and bundles.
☑	**Layout Discovery**	Provides a way for modules or themes to register layouts.
☑	**Media**	Manages the creation, configuration, and display of media items.
☑	**Media Library**	Enhances the media list with additional features to more easily find and use existing media items.
☑	**Menu UI**	Provides a user interface for managing menus.
☑	**MySQL**	Provides the MySQL database driver.
☑	**Node**	Manages the creation, configuration, and display of the main site content.
☑	**Password Compatibility**	Provides the password checking algorithm for user accounts created with Drupal prior to version 10.1.0.
☑	**Path**	Allows users to create custom URLs for existing paths on the site.
☐	**PostgreSQL**	Provides the PostgreSQL database driver.
☑	**Responsive Image**	Provides functionality to output responsive images using the HTML5 picture tag.
☐	**Search**	Allows users to create search pages based on plugins provided by other modules.
☐	**Settings Tray**	Allows users to directly edit the configuration of blocks on the current page.
☑	**Shortcut**	Allows users to create sets of shortcuts within the site.
☐	**SQLite**	Provides the SQLite database driver.
☐	**Statistics** (Deprecated)	Logs how many times content is viewed.
☐	**Syslog**	Logs events to the web server's system log.
☑	**System**	Provides user interfaces for core systems.
☑	**Taxonomy**	Enables the categorization of content.



☑	**Text Editor**	Provides a framework to associate text editors (like WYSIWYGs) and toolbars with text formats.
☑	**Toolbar**	Provides an administration toolbar to display links provided by modules.
☐	**Tour** [(Deprecated)]	Displays guided tours of the site interface.
☑	**Update Manager**	Checks for updates and allows users to manage them through a user interface.
☑	**User**	Allows users to register and log in, and manages user roles and permissions.
☑	**Views**	Provides a framework to fetch information from the database and to display it in different formats.
☑	**Views UI**	Provides a user interface for creating and managing views.
☐	**Workflows**	Provides an interface to create workflows with transitions between different states (for example publication or user status) provided by other modules.
☐	**Workspaces**	Allows users to stage content or preview a full site by using multiple workspaces on a single site.

Administration

☑	**Admin Toolbar**	Provides an improved drop-down menu interface to the site Toolbar.
☑	**Admin Toolbar Extra Tools**	Adds menu links like Flush cache, Run cron, Run updates, and Logout under Drupal icon.
☐	**Admin Toolbar Links Access Filter** (Deprecated)	Provides a workaround for the common problem that users with 'Use the administration pages and help' permission see menu links they don't have access permission for. Deprecated from Drupal 10.3 and above.
☑	**Admin Toolbar Search**	Provides search of Admin Toolbar items.
☑	**Mail Login**	This module enables users to login by email address.
☐	**PHP Authentication shield**	Creates a general shield for the site.
☐	**Upgrade Status**	Review Drupal major upgrade readiness of the environment and components of the site.

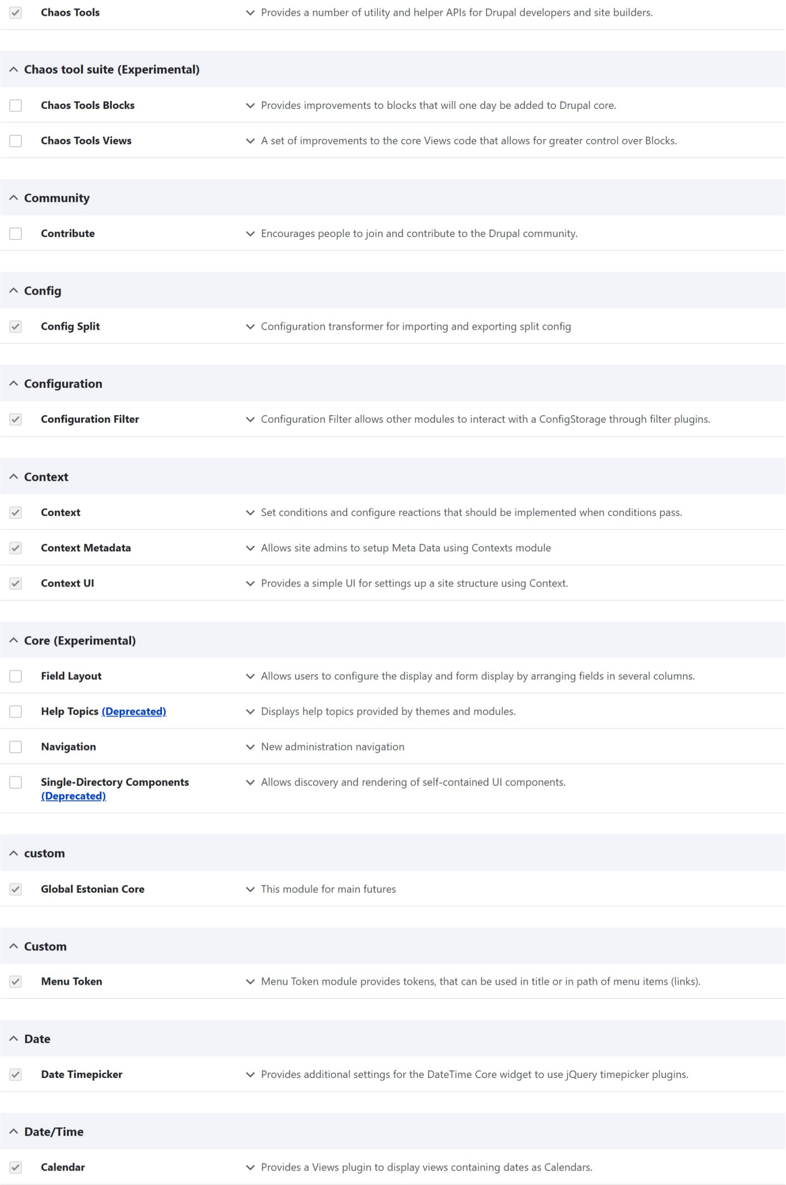
Advanced CSS/JS Aggregation

☐	**AdvAgg Bundler**	Customize the number of aggregates to be created.
☐	**AdvAgg CSS/JS Validator**	Validate the CSS and JS files used in Aggregation for syntax errors.
☐	**AdvAgg External Minification**	Minify Javascript and/or CSS with a command line minifier.
☐	**AdvAgg Minify CSS**	Minify CSS.
☐	**AdvAgg Minify JavaScript**	Minify JavaScript with a 3rd party minifier; JSMin+, JSMin c ext, JShrink, and JSqueeze currently.
☐	**AdvAgg Modifier**	Allows one to alter the CSS and JS array.
☐	**Advanced CSS/JS Aggregation**	Aggregates multiple CSS/JS files in a way that prevents 404 from happening when accessing a CSS or JS file.

Blazy

☑	**Blazy**	Provides media lazy loading.
☐	**Blazy Layout**	Provides a single layout with dynamic regions for Layout Builder.
☐	**Blazy UI**	Provides Blazy configuration UI.

Chaos tool suite



☑	**Chaos Tools**	Provides a number of utility and helper APIs for Drupal developers and site builders.

Chaos tool suite (Experimental)

☐	**Chaos Tools Blocks**	Provides improvements to blocks that will one day be added to Drupal core.
☐	**Chaos Tools Views**	A set of improvements to the core Views code that allows for greater control over Blocks.

Community

☐	**Contribute**	Encourages people to join and contribute to the Drupal community.

Config

☑	**Config Split**	Configuration transformer for importing and exporting split config

Configuration

☑	**Configuration Filter**	Configuration Filter allows other modules to interact with a ConfigStorage through filter plugins.

Context

☑	**Context**	Set conditions and configure reactions that should be implemented when conditions pass.
☑	**Context Metadata**	Allows site admins to setup Meta Data using Contexts module
☑	**Context UI**	Provides a simple UI for settings up a site structure using Context.

Core (Experimental)

☐	**Field Layout**	Allows users to configure the display and form display by arranging fields in several columns.
☐	**Help Topics** (Deprecated)	Displays help topics provided by themes and modules.
☐	**Navigation**	New administration navigation
☐	**Single-Directory Components** (Deprecated)	Allows discovery and rendering of self-contained UI components.

custom

☑	**Global Estonian Core**	This module for main futures

Custom

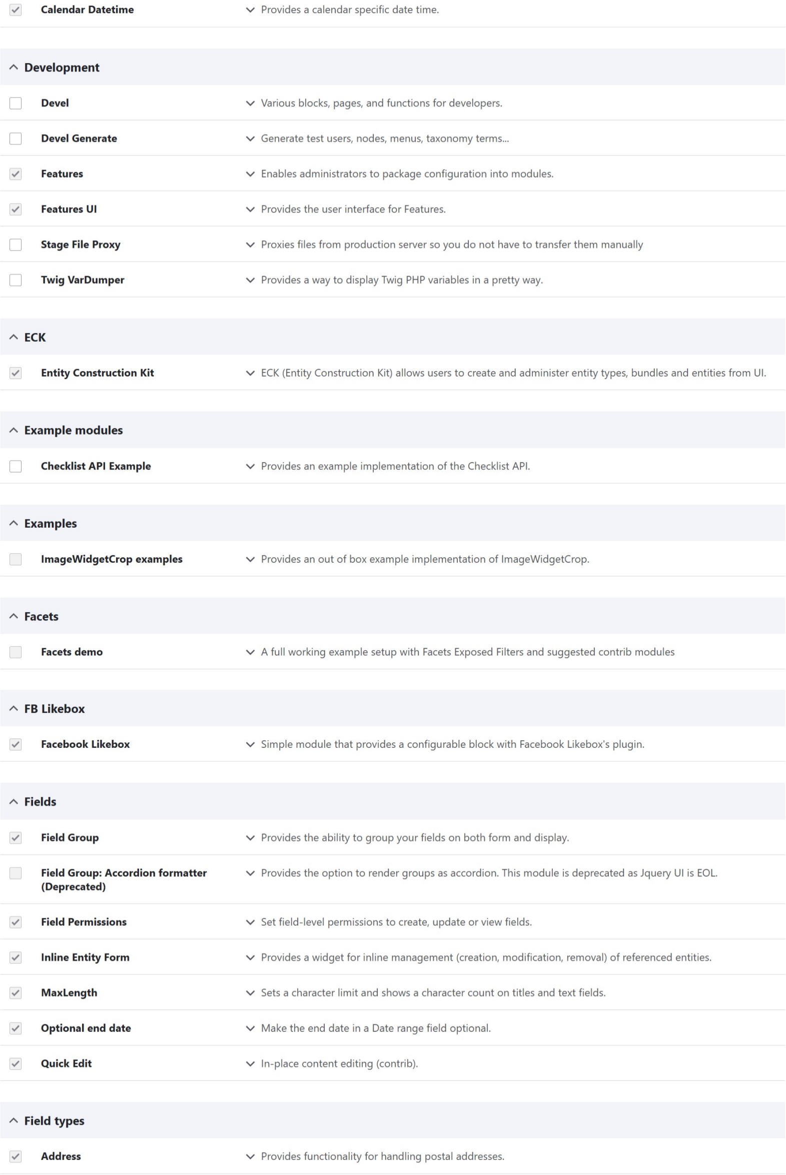
☑	**Menu Token**	Menu Token module provides tokens, that can be used in title or in path of menu items (links).

Date

☑	**Date Timepicker**	Provides additional settings for the DateTime Core widget to use jQuery timepicker plugins.

Date/Time

☑	**Calendar**	Provides a Views plugin to display views containing dates as Calendars.



☑	**Calendar Datetime**	Provides a calendar specific date time.

Development

☐	**Devel**	Various blocks, pages, and functions for developers.
☐	**Devel Generate**	Generate test users, nodes, menus, taxonomy terms...
☑	**Features**	Enables administrators to package configuration into modules.
☑	**Features UI**	Provides the user interface for Features.
☐	**Stage File Proxy**	Proxies files from production server so you do not have to transfer them manually
☐	**Twig VarDumper**	Provides a way to display Twig PHP variables in a pretty way.

ECK

☑	**Entity Construction Kit**	ECK (Entity Construction Kit) allows users to create and administer entity types, bundles and entities from UI.

Example modules

☐	**Checklist API Example**	Provides an example implementation of the Checklist API.

Examples

☐	**ImageWidgetCrop examples**	Provides an out of box example implementation of ImageWidgetCrop.

Facets

☐	**Facets demo**	A full working example setup with Facets Exposed Filters and suggested contrib modules

FB Likebox

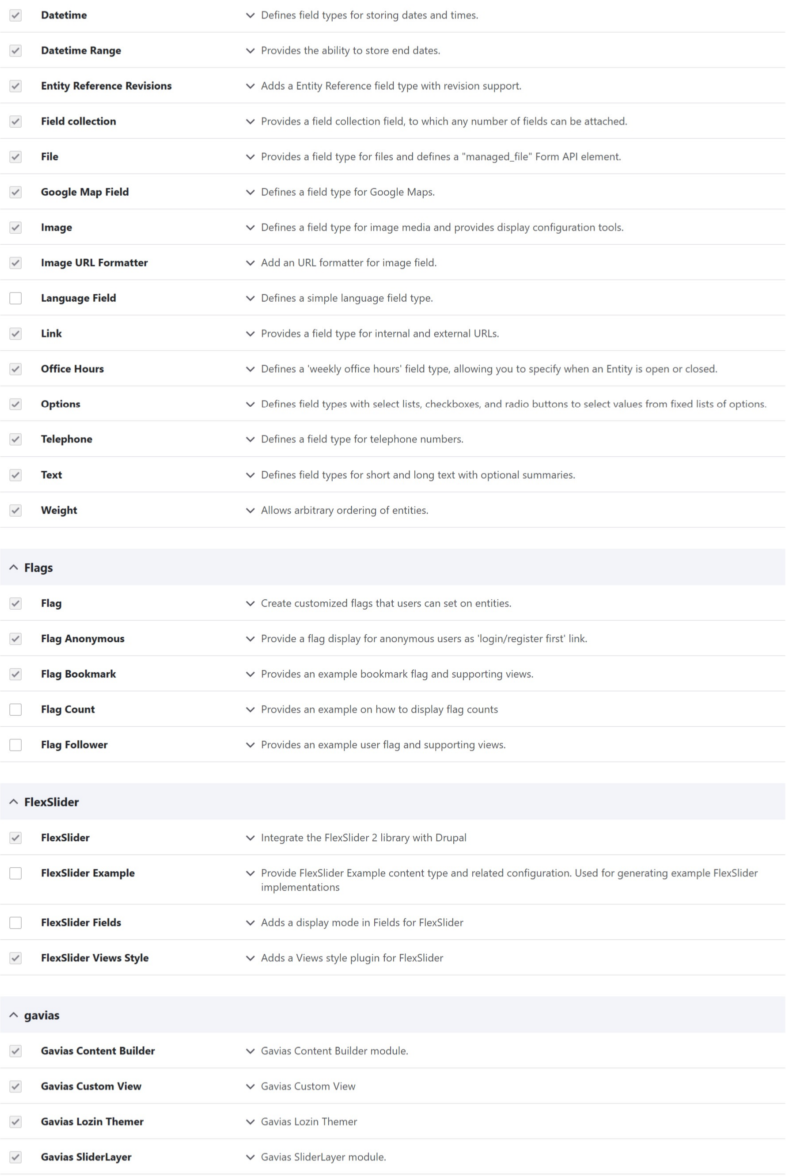
☑	**Facebook Likebox**	Simple module that provides a configurable block with Facebook Likebox's plugin.

Fields

☑	**Field Group**	Provides the ability to group your fields on both form and display.
☐	**Field Group: Accordion formatter (Deprecated)**	Provides the option to render groups as accordion. This module is deprecated as Jquery UI is EOL.
☑	**Field Permissions**	Set field-level permissions to create, update or view fields.
☑	**Inline Entity Form**	Provides a widget for inline management (creation, modification, removal) of referenced entities.
☑	**MaxLength**	Sets a character limit and shows a character count on titles and text fields.
☑	**Optional end date**	Make the end date in a Date range field optional.
☑	**Quick Edit**	In-place content editing (contrib).

Field types

☑	**Address**	Provides functionality for handling postal addresses.



☑	**Datetime**	Defines field types for storing dates and times.
☑	**Datetime Range**	Provides the ability to store end dates.
☑	**Entity Reference Revisions**	Adds a Entity Reference field type with revision support.
☑	**Field collection**	Provides a field collection field, to which any number of fields can be attached.
☑	**File**	Provides a field type for files and defines a "managed_file" Form API element.
☑	**Google Map Field**	Defines a field type for Google Maps.
☑	**Image**	Defines a field type for image media and provides display configuration tools.
☑	**Image URL Formatter**	Add an URL formatter for image field.
☐	**Language Field**	Defines a simple language field type.
☑	**Link**	Provides a field type for internal and external URLs.
☑	**Office Hours**	Defines a 'weekly office hours' field type, allowing you to specify when an Entity is open or closed.
☑	**Options**	Defines field types with select lists, checkboxes, and radio buttons to select values from fixed lists of options.
☑	**Telephone**	Defines a field type for telephone numbers.
☑	**Text**	Defines field types for short and long text with optional summaries.
☑	**Weight**	Allows arbitrary ordering of entities.

Flags

☑	**Flag**	Create customized flags that users can set on entities.
☑	**Flag Anonymous**	Provide a flag display for anonymous users as 'login/register first' link.
☑	**Flag Bookmark**	Provides an example bookmark flag and supporting views.
☐	**Flag Count**	Provides an example on how to display flag counts
☐	**Flag Follower**	Provides an example user flag and supporting views.

FlexSlider

☑	**FlexSlider**	Integrate the FlexSlider 2 library with Drupal
☐	**FlexSlider Example**	Provide FlexSlider Example content type and related configuration. Used for generating example FlexSlider implementations
☐	**FlexSlider Fields**	Adds a display mode in Fields for FlexSlider
☑	**FlexSlider Views Style**	Adds a Views style plugin for FlexSlider

gavias

☑	**Gavias Content Builder**	Gavias Content Builder module.
☑	**Gavias Custom View**	Gavias Custom View
☑	**Gavias Lozin Themer**	Gavias Lozin Themer
☑	**Gavias SliderLayer**	Gavias SliderLayer module.

☑	**Gavias Themer**	Gavias Themer module.

General Data Protection Regulation

☐	**Anonymizer**	Provides ways to anonymize data.
☐	**General Data Protection Regulation (GDPR)**	Provides help for making your drupal site GDPR-compliant.
☐	**General Data Protection Regulation (GDPR) - Consent Tracking**	Allow tracking of GDPR Consent
☐	**General Data Protection Regulation (GDPR) - Fields**	Allow tracking and removing of user data in all fields.
☐	**General Data Protection Regulation (GDPR) - Obfuscated SQL Dump**	Provides a drush command for obfuscating database dumps.
☐	**General Data Protection Regulation (GDPR) - Tasks**	Allow tracking of SARs and Removal requests.

Geocoding

☑	**Geocoder**	An API to geocode and reverse geocode data into other GIS data types.
☑	**Geocoder Address**	Provides Geocoder integration with Address module.
☑	**Geocoder Field**	Geocodes the content of a field and stores the result in other field and vice-versa.
☑	**Geocoder Geofield**	Provides Geocoder integration with contrib Geofield module.

Geofield

☑	**Geofield**	Stores geographic and location data (points, lines, and polygons).
☑	**Geofield Map**	Map Widget, Formatter and Views integration for Geofields.
☐	**Geofield Map Extras**	This sub-module provides additional features to the main Geofield Map module.
☑	**Leaflet**	Featured Integration with the Leaflet map scripting library.
☐	**Leaflet Demo**	Creates a page showcasing all Leaflet-powered maps available on your system. Optionally use with "IP Geolocation Views and Maps" to center the maps on your current location.
☑	**Leaflet Markercluster**	Extends Leaflet with the Markercluster library.
☑	**Leaflet More Maps**	Adds a swag of map styles to Leaflet, e.g Thunderforest, Esri, Stamen, Google.
☑	**Leaflet Views**	Views integration for the Leaflet module.

Image Optimize

☑	**Image Optimize (or ImageAPI Optimize)**	Define pipelines for image optimization and provide integration with core image styles.
☑	**ImageAPI Optimize GD**	Provides ImageAPI Optimize processor for adjusting image quality via GD.

Input filters

☐	**Insert view**	Input filter which allows to embed views.

Insert

☑	**Insert Block**	Inserts the contents of a block into into the text using [block:block_entity_id] placeholder.

Job Scheduler

☑	**Job Scheduler**	Scheduler API
☐	**Job Scheduler Waiting**	Enables jobs with workers that wait indefinitely for jobs.

jQuery UI

☑	**jQuery UI**	Provides jQuery UI library.
☑	**jQuery UI Datepicker**	Provides jQuery UI Datepicker library.
☐	**jQuery UI Draggable**	Provides jQuery UI Draggable library.
☐	**jQuery UI Resizable**	Provides jQuery UI Resizable library.
☑	**jQuery UI Slider**	Provides jQuery UI Slider library.
☑	**jQuery UI Touch Punch**	Provides jQuery UI Touch Punch library.

Layout

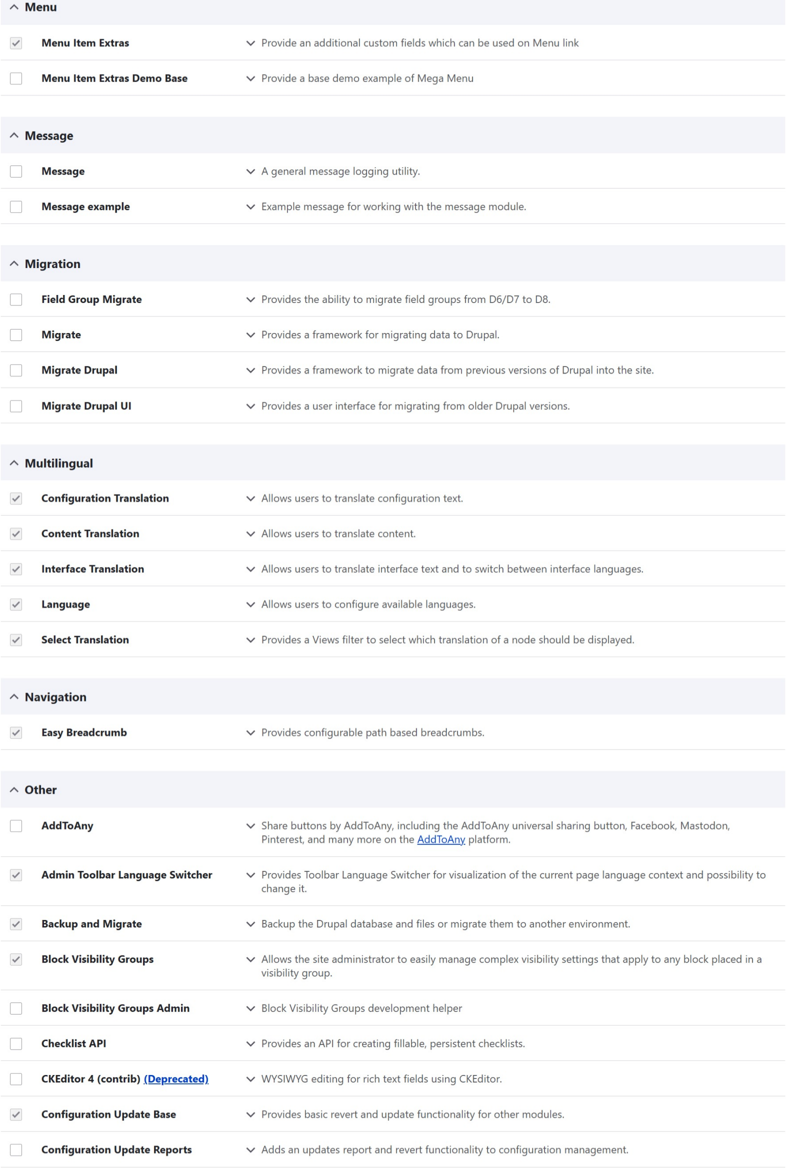
☐	**Page Manager**	Provides a way to place blocks on a custom page.
☐	**Page Manager UI**	Provides a simple UI for Page Manager.

Mail

☐	**Simplenews**	Send newsletters to subscribed email addresses. For uninstall go to Configuration > Web services > Simplenews > Settings and hit "Prepare uninstall".
☐	**Simplenews Demo**	Demo module for Simplenews.

Media

☑	**Colorbox**	A light-weight, customizable lightbox plugin for jQuery.
☑	**Crop API**	Provides storage and API for image crops.
☑	**ImageWidgetCrop**	Provides an interface for using the features of the Crop API.
☑	**Imce File Manager**	Provides a file manager supporting personal folders.
☑	**Insert**	Assists in inserting files, images, or other media into the body field as well as other editor and text areas.
☐	**Insert Colorbox**	Assists in inserting colorbox enhanced images or galleries into the body field as well as other editor and text areas.
☐	**Insert Media (Experimental)**	Assists in inserting media supplied by the Media Library widget into the body field as well as other editor and text areas. Please be aware that this module might be declared deprecated any time!
☐	**Insert Responsive Image (Experimental)**	Allows inserting responsive images into the body field as well as other editor and text areas using the Responsive Image module. Please be aware that this module might be declared deprecated any time!
☑	**oEmbed Providers**	Allows site builders and developers to manage oEmbed providers



Menu

☑	**Menu Item Extras**	Provide an additional custom fields which can be used on Menu link
☐	**Menu Item Extras Demo Base**	Provide a base demo example of Mega Menu

Message

☐	**Message**	A general message logging utility.
☐	**Message example**	Example message for working with the message module.

Migration

☐	**Field Group Migrate**	Provides the ability to migrate field groups from D6/D7 to D8.
☐	**Migrate**	Provides a framework for migrating data to Drupal.
☐	**Migrate Drupal**	Provides a framework to migrate data from previous versions of Drupal into the site.
☐	**Migrate Drupal UI**	Provides a user interface for migrating from older Drupal versions.

Multilingual

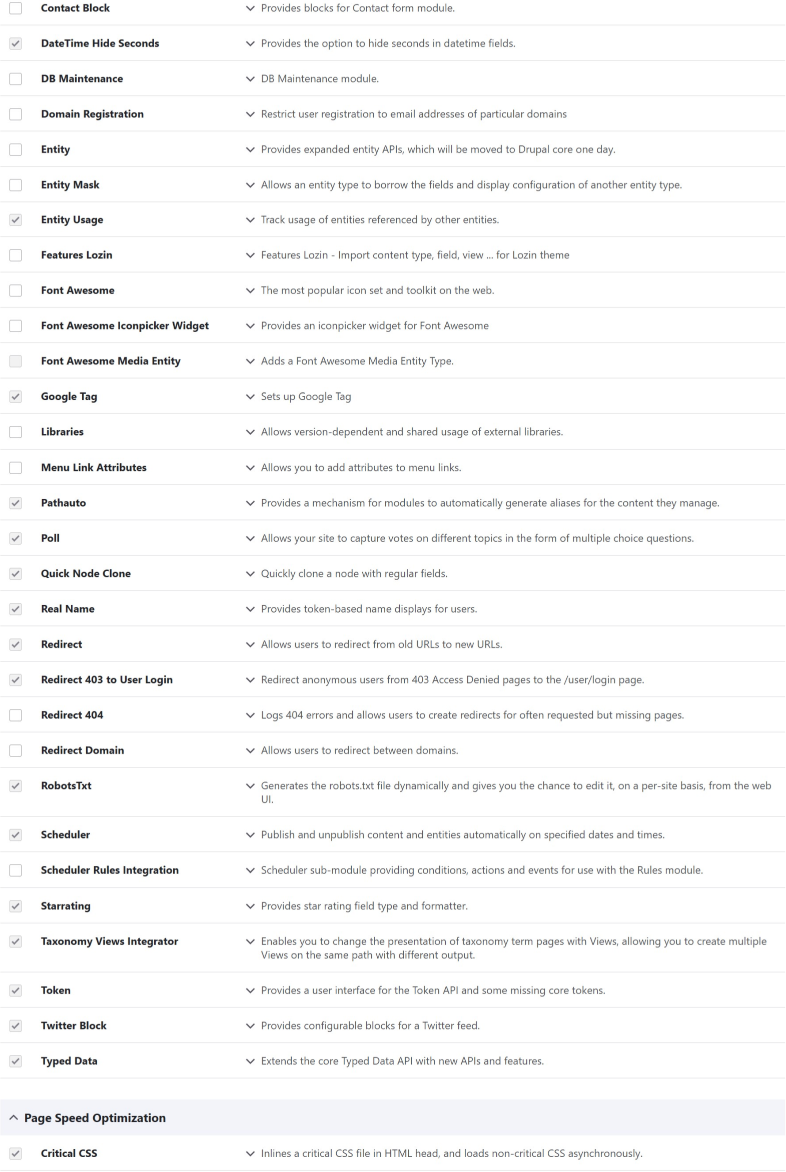
☑	**Configuration Translation**	Allows users to translate configuration text.
☑	**Content Translation**	Allows users to translate content.
☑	**Interface Translation**	Allows users to translate interface text and to switch between interface languages.
☑	**Language**	Allows users to configure available languages.
☑	**Select Translation**	Provides a Views filter to select which translation of a node should be displayed.

Navigation

☑	**Easy Breadcrumb**	Provides configurable path based breadcrumbs.

Other

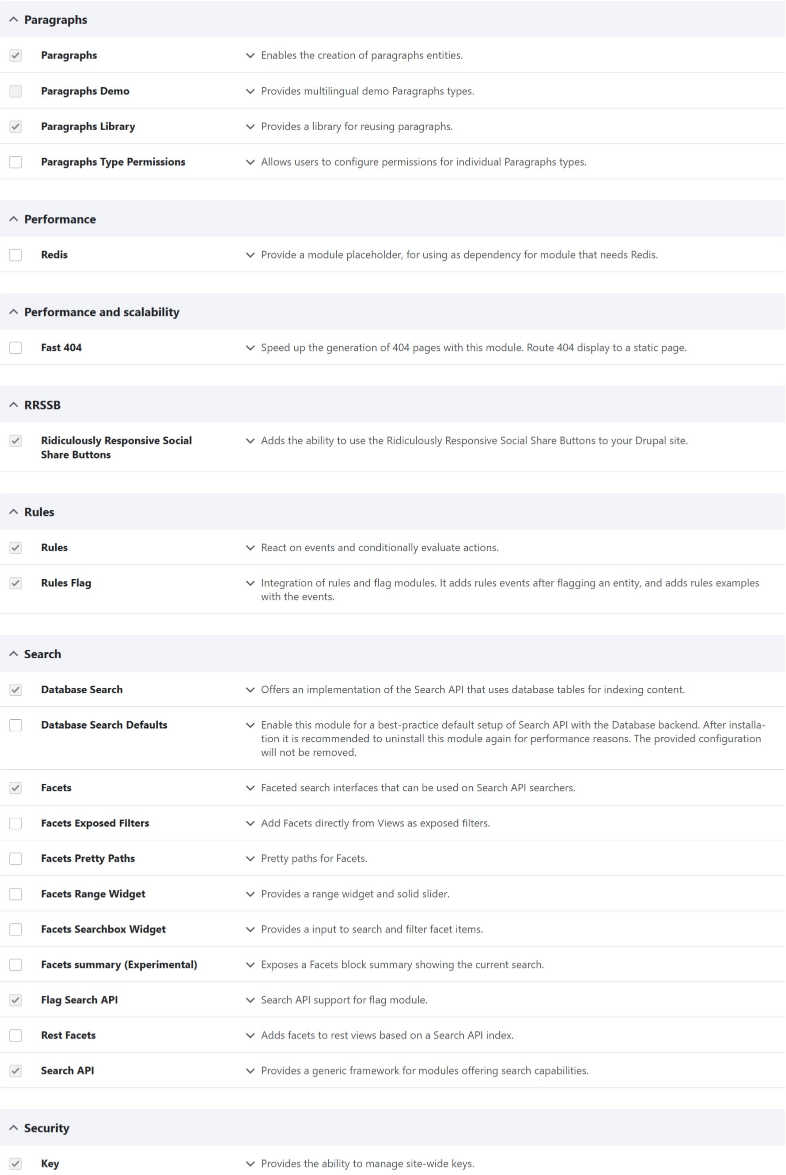
☐	**AddToAny**	Share buttons by AddToAny, including the AddToAny universal sharing button, Facebook, Mastodon, Pinterest, and many more on the AddToAny platform.
☑	**Admin Toolbar Language Switcher**	Provides Toolbar Language Switcher for visualization of the current page language context and possibility to change it.
☑	**Backup and Migrate**	Backup the Drupal database and files or migrate them to another environment.
☑	**Block Visibility Groups**	Allows the site administrator to easily manage complex visibility settings that apply to any block placed in a visibility group.
☐	**Block Visibility Groups Admin**	Block Visibility Groups development helper
☐	**Checklist API**	Provides an API for creating fillable, persistent checklists.
☐	**CKEditor 4 (contrib) (Deprecated)**	WYSIWYG editing for rich text fields using CKEditor.
☑	**Configuration Update Base**	Provides basic revert and update functionality for other modules.
☐	**Configuration Update Reports**	Adds an updates report and revert functionality to configuration management.



☐	**Contact Block**	Provides blocks for Contact form module.
☑	**DateTime Hide Seconds**	Provides the option to hide seconds in datetime fields.
☐	**DB Maintenance**	DB Maintenance module.
☐	**Domain Registration**	Restrict user registration to email addresses of particular domains
☐	**Entity**	Provides expanded entity APIs, which will be moved to Drupal core one day.
☐	**Entity Mask**	Allows an entity type to borrow the fields and display configuration of another entity type.
☑	**Entity Usage**	Track usage of entities referenced by other entities.
☐	**Features Lozin**	Features Lozin - Import content type, field, view ... for Lozin theme
☐	**Font Awesome**	The most popular icon set and toolkit on the web.
☐	**Font Awesome Iconpicker Widget**	Provides an iconpicker widget for Font Awesome
☐	**Font Awesome Media Entity**	Adds a Font Awesome Media Entity Type.
☑	**Google Tag**	Sets up Google Tag
☐	**Libraries**	Allows version-dependent and shared usage of external libraries.
☐	**Menu Link Attributes**	Allows you to add attributes to menu links.
☑	**Pathauto**	Provides a mechanism for modules to automatically generate aliases for the content they manage.
☑	**Poll**	Allows your site to capture votes on different topics in the form of multiple choice questions.
☑	**Quick Node Clone**	Quickly clone a node with regular fields.
☑	**Real Name**	Provides token-based name displays for users.
☑	**Redirect**	Allows users to redirect from old URLs to new URLs.
☑	**Redirect 403 to User Login**	Redirect anonymous users from 403 Access Denied pages to the /user/login page.
☐	**Redirect 404**	Logs 404 errors and allows users to create redirects for often requested but missing pages.
☐	**Redirect Domain**	Allows users to redirect between domains.
☑	**RobotsTxt**	Generates the robots.txt file dynamically and gives you the chance to edit it, on a per-site basis, from the web UI.
☑	**Scheduler**	Publish and unpublish content and entities automatically on specified dates and times.
☐	**Scheduler Rules Integration**	Scheduler sub-module providing conditions, actions and events for use with the Rules module.
☑	**Starrating**	Provides star rating field type and formatter.
☑	**Taxonomy Views Integrator**	Enables you to change the presentation of taxonomy term pages with Views, allowing you to create multiple Views on the same path with different output.
☑	**Token**	Provides a user interface for the Token API and some missing core tokens.
☑	**Twitter Block**	Provides configurable blocks for a Twitter feed.
☑	**Typed Data**	Extends the core Typed Data API with new APIs and features.

Page Speed Optimization

☑	**Critical CSS**	Inlines a critical CSS file in HTML head, and loads non-critical CSS asynchronously.



Paragraphs

☑	**Paragraphs**	Enables the creation of paragraphs entities.
☐	**Paragraphs Demo**	Provides multilingual demo Paragraphs types.
☑	**Paragraphs Library**	Provides a library for reusing paragraphs.
☐	**Paragraphs Type Permissions**	Allows users to configure permissions for individual Paragraphs types.

Performance

☐	**Redis**	Provide a module placeholder, for using as dependency for module that needs Redis.

Performance and scalability

☐	**Fast 404**	Speed up the generation of 404 pages with this module. Route 404 display to a static page.

RRSSB

☑	**Ridiculously Responsive Social Share Buttons**	Adds the ability to use the Ridiculously Responsive Social Share Buttons to your Drupal site.

Rules

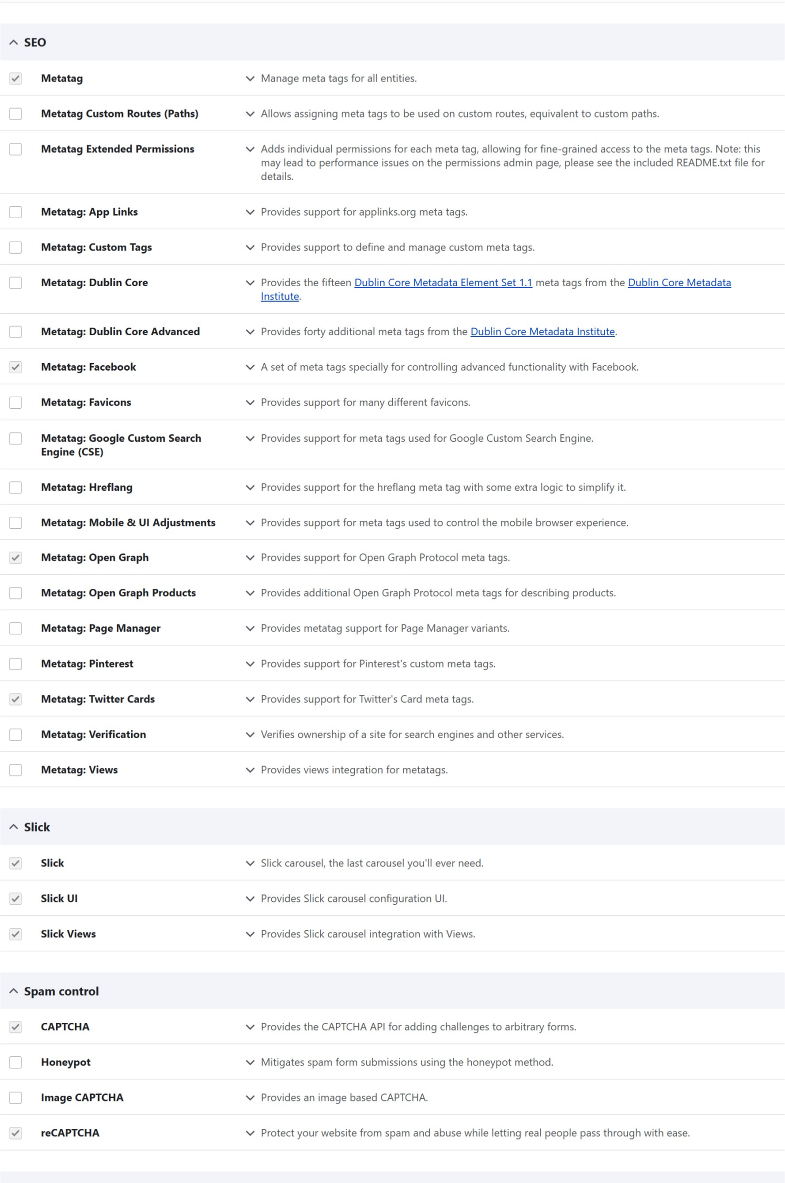
☑	**Rules**	React on events and conditionally evaluate actions.
☑	**Rules Flag**	Integration of rules and flag modules. It adds rules events after flagging an entity, and adds rules examples with the events.

Search

☑	**Database Search**	Offers an implementation of the Search API that uses database tables for indexing content.
☐	**Database Search Defaults**	Enable this module for a best-practice default setup of Search API with the Database backend. After installation it is recommended to uninstall this module again for performance reasons. The provided configuration will not be removed.
☑	**Facets**	Faceted search interfaces that can be used on Search API searchers.
☐	**Facets Exposed Filters**	Add Facets directly from Views as exposed filters.
☐	**Facets Pretty Paths**	Pretty paths for Facets.
☐	**Facets Range Widget**	Provides a range widget and solid slider.
☐	**Facets Searchbox Widget**	Provides a input to search and filter facet items.
☐	**Facets summary (Experimental)**	Exposes a Facets block summary showing the current search.
☑	**Flag Search API**	Search API support for flag module.
☐	**Rest Facets**	Adds facets to rest views based on a Search API index.
☑	**Search API**	Provides a generic framework for modules offering search capabilities.

Security

☑	**Key**	Provides the ability to manage site-wide keys.



SEO

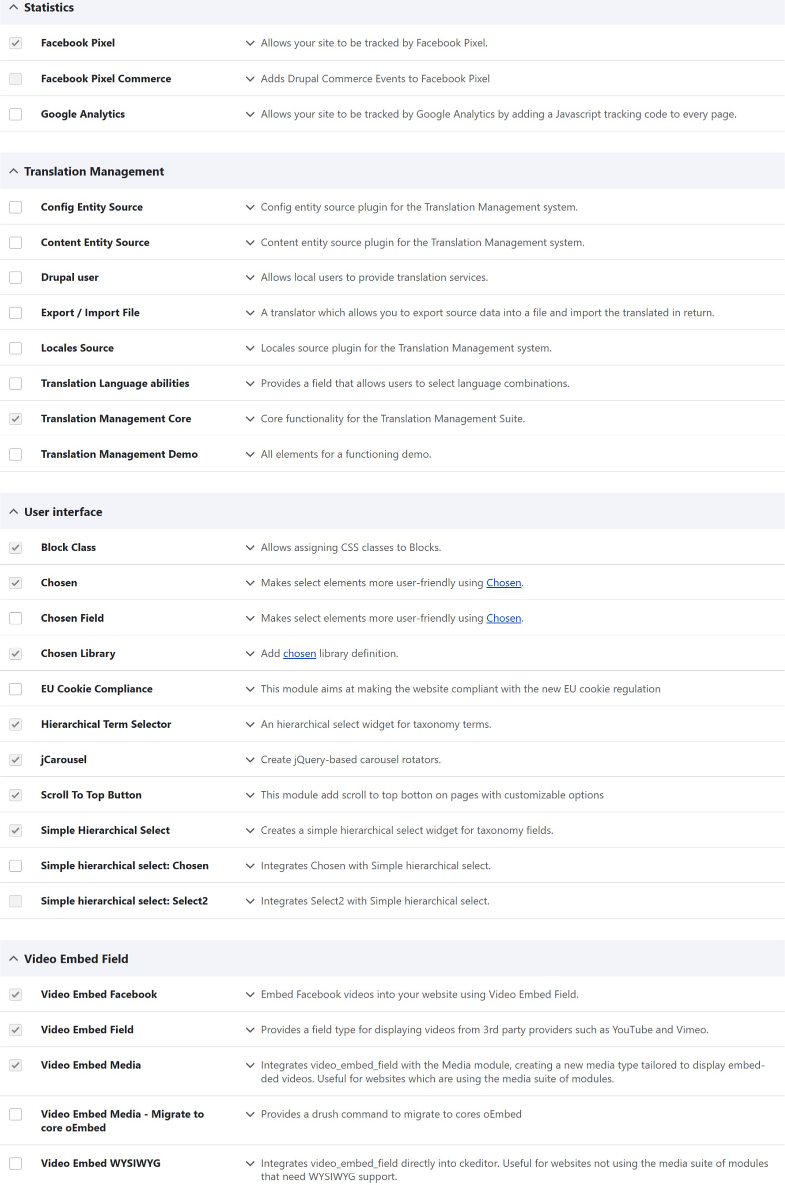
☑	**Metatag**	Manage meta tags for all entities.
☐	**Metatag Custom Routes (Paths)**	Allows assigning meta tags to be used on custom routes, equivalent to custom paths.
☐	**Metatag Extended Permissions**	Adds individual permissions for each meta tag, allowing for fine-grained access to the meta tags. Note: this may lead to performance issues on the permissions admin page, please see the included README.txt file for details.
☐	**Metatag: App Links**	Provides support for applinks.org meta tags.
☐	**Metatag: Custom Tags**	Provides support to define and manage custom meta tags.
☐	**Metatag: Dublin Core**	Provides the fifteen Dublin Core Metadata Element Set 1.1 meta tags from the Dublin Core Metadata Institute.
☐	**Metatag: Dublin Core Advanced**	Provides forty additional meta tags from the Dublin Core Metadata Institute.
☑	**Metatag: Facebook**	A set of meta tags specially for controlling advanced functionality with Facebook.
☐	**Metatag: Favicons**	Provides support for many different favicons.
☐	**Metatag: Google Custom Search Engine (CSE)**	Provides support for meta tags used for Google Custom Search Engine.
☐	**Metatag: Hreflang**	Provides support for the hreflang meta tag with some extra logic to simplify it.
☐	**Metatag: Mobile & UI Adjustments**	Provides support for meta tags used to control the mobile browser experience.
☑	**Metatag: Open Graph**	Provides support for Open Graph Protocol meta tags.
☐	**Metatag: Open Graph Products**	Provides additional Open Graph Protocol meta tags for describing products.
☐	**Metatag: Page Manager**	Provides metatag support for Page Manager variants.
☐	**Metatag: Pinterest**	Provides support for Pinterest's custom meta tags.
☑	**Metatag: Twitter Cards**	Provides support for Twitter's Card meta tags.
☐	**Metatag: Verification**	Verifies ownership of a site for search engines and other services.
☐	**Metatag: Views**	Provides views integration for metatags.

Slick

☑	**Slick**	Slick carousel, the last carousel you'll ever need.
☑	**Slick UI**	Provides Slick carousel configuration UI.
☑	**Slick Views**	Provides Slick carousel integration with Views.

Spam control

☑	**CAPTCHA**	Provides the CAPTCHA API for adding challenges to arbitrary forms.
☐	**Honeypot**	Mitigates spam form submissions using the honeypot method.
☐	**Image CAPTCHA**	Provides an image based CAPTCHA.
☑	**reCAPTCHA**	Protect your website from spam and abuse while letting real people pass through with ease.



Statistics

☑	**Facebook Pixel**	Allows your site to be tracked by Facebook Pixel.
☐	**Facebook Pixel Commerce**	Adds Drupal Commerce Events to Facebook Pixel
☐	**Google Analytics**	Allows your site to be tracked by Google Analytics by adding a Javascript tracking code to every page.

Translation Management

☐	**Config Entity Source**	Config entity source plugin for the Translation Management system.
☐	**Content Entity Source**	Content entity source plugin for the Translation Management system.
☐	**Drupal user**	Allows local users to provide translation services.
☐	**Export / Import File**	A translator which allows you to export source data into a file and import the translated in return.
☐	**Locales Source**	Locales source plugin for the Translation Management system.
☐	**Translation Language abilities**	Provides a field that allows users to select language combinations.
☑	**Translation Management Core**	Core functionality for the Translation Management Suite.
☐	**Translation Management Demo**	All elements for a functioning demo.

User interface

☑	**Block Class**	Allows assigning CSS classes to Blocks.
☑	**Chosen**	Makes select elements more user-friendly using Chosen.
☐	**Chosen Field**	Makes select elements more user-friendly using Chosen.
☑	**Chosen Library**	Add chosen library definition.
☐	**EU Cookie Compliance**	This module aims at making the website compliant with the new EU cookie regulation
☑	**Hierarchical Term Selector**	An hierarchical select widget for taxonomy terms.
☑	**jCarousel**	Create jQuery-based carousel rotators.
☑	**Scroll To Top Button**	This module add scroll to top botton on pages with customizable options
☑	**Simple Hierarchical Select**	Creates a simple hierarchical select widget for taxonomy fields.
☐	**Simple hierarchical select: Chosen**	Integrates Chosen with Simple hierarchical select.
☐	**Simple hierarchical select: Select2**	Integrates Select2 with Simple hierarchical select.

Video Embed Field

☑	**Video Embed Facebook**	Embed Facebook videos into your website using Video Embed Field.
☑	**Video Embed Field**	Provides a field type for displaying videos from 3rd party providers such as YouTube and Vimeo.
☑	**Video Embed Media**	Integrates video_embed_field with the Media module, creating a new media type tailored to display embedded videos. Useful for websites which are using the media suite of modules.
☐	**Video Embed Media - Migrate to core oEmbed**	Provides a drush command to migrate to cores oEmbed
☐	**Video Embed WYSIWYG**	Integrates video_embed_field directly into ckeditor. Useful for websites not using the media suite of modules that need WYSIWYG support.

Views

☑	**Better Exposed Filters**	Provides advanced options (e.g. links, checkboxes, or other widgets) to exposed Views elements.
☑	**Lazy Views**	Lazy Load views on events.
☑	**Views Autocomplete Filters**	Use Autocomplete for string field filters.
☑	**Views Bootstrap 4**	Allows for different styles to be used in views to work with Bootstrap 4 components.
☐	**Views Bulk Operations**	Adds an ability to perform bulk operations on selected entities from view results.
☑	**Views Data Export**	Plugin to export views data into various file formats.
☑	**Views Infinite Scroll**	A pager which allows an infinite scroll effect for views.
☑	**Views Templates**	Reintroduces dynamic default views.

Views Bulk Operations

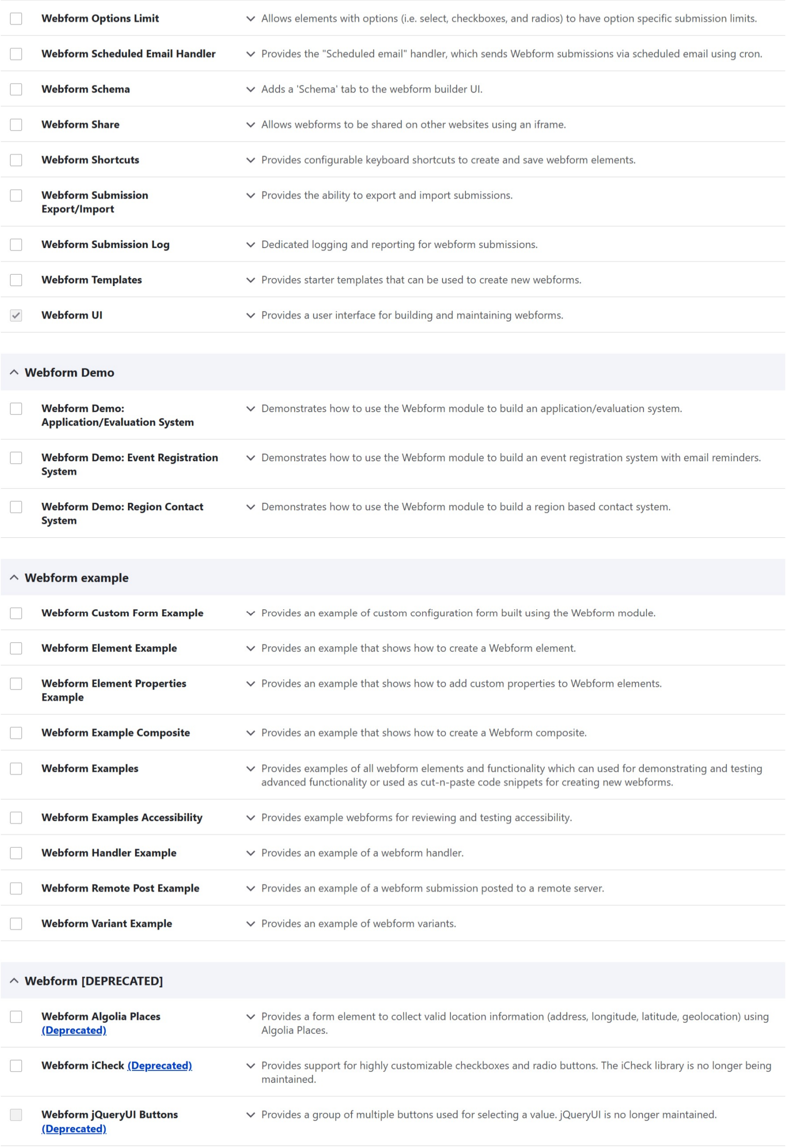
☐	**Actions Permissions**	Adds access permissions on all actions allowing admins to restrict access on a per-role basis.

Voting

☑	**Voting API**	Provides a voting API that other modules can make use of.
☐	**Voting API Tokens**	Token support for Voting API

Webform

☑	**Webform**	Enables the creation of webforms and questionnaires.
☐	**Webform Access**	Provides webform access controls for webform nodes.
☐	**Webform Attachment**	Provides an element that generates or loads a file that can be attached to a submission or email.
☑	**Webform Bootstrap**	Helps support Webform to Bootstrap integration.
☐	**Webform Cards**	Provides a 'Card' container element for fast clientside multistep form pagination.
☐	**Webform Clientside Validation**	Helps support Webform Clientside Validation integration.
☐	**Webform Custom Options**	Provides a webform element for converting HTML or SVG markup into a selectable single or multiple options input.
☐	**Webform Devel**	Provides development tools for the Webform module.
☐	**Webform Entity Print (PDF)**	Provides Entity Print (PDF) integration and allows site builders to download, export, and email PDF copies of webform submissions.
☐	**Webform Entity Print (PDF) Attachment**	Provides Webform Entity Print (PDF) Attachment integration.
☐	**Webform Image Select**	Provides a webform element for a selecting an image.
☑	**Webform Node**	Provides a Webform content type which allows webforms to be integrated into a website as nodes. Machine name: webform_node Version: 6.2.9 Requires: Field, Node, Text, Filter, User, System, Path, Path alias, Webform Required by: Webform Access (disabled), Webform Demo: Application/Evaluation System (disabled), Webform Demo: Event Registration System (disabled), Webform Demo: Region Contact System (disabled) **Permissions**



☐	**Webform Options Limit**	Allows elements with options (i.e. select, checkboxes, and radios) to have option specific submission limits.
☐	**Webform Scheduled Email Handler**	Provides the "Scheduled email" handler, which sends Webform submissions via scheduled email using cron.
